

# Hydrotherapy Pool Accessories

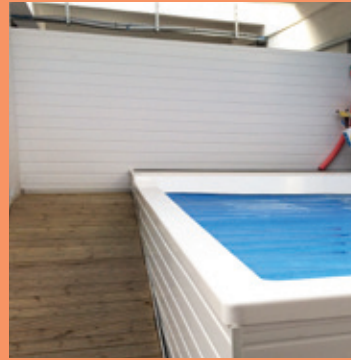

## Heating Your Pool

With the trend for new hydrotherapy centres to have much larger hydrotherapy pools, the added cost for heating these larger pools needs to be considered carefully.

**Air Source Heat Pumps:** Installing the correct size heat pump results in considerably lower pool water heating costs and should be considered when buying pools with larger water volume. A heat pump can reduce your electrical heating costs by up to 75%. 1kW of power into a heat pump can result in 5kW of heat coming out of the heat pump. The ASHP resembles an air conditioning unit and is positioned outside the building close to the swimming pool plant either on the floor or wall mounted.

**Heat Exchanger:** If you have an existing central heating system you may be able to have a heat exchanger fitted to utilise the heat already being created.

**Wall Covering:** To complete the look of your new pool room, you may want to choose a contrasting colour UPVC wall panel or a white horizontal grooved panel to complete your décor. Westcoast can provide you with colour samples.

**Dehumidifiers:** Most Pool rooms will benefit from having a dehumidifier fitted in the room.

Dehumidifiers are exceptional for maintaining and controlling the humidity levels whilst helping you keep your heating costs low.

The dehumidifiers supplied by Westcoast are specifically selected for use in swimming pool environments and easily cope with chlorinated water in the atmosphere.

## Life jackets for dogs

Our range of life jackets offers dogs of every size supportive buoyancy while in the water. Made from high quality strong durable fabric in a choice of Orange or Green. The padded adjustable straps also provide a comfortable fit for Hydrotherapy and the reflective strips make them ideal for boating or beach activities. A handle on the back allows you to assist your dog. Eight sizes available.

# Accessories & Extras for your Hydrotherapy Business

Your lovely new pool has sparkling blue water, you and your customers will want to see it stay that way! However without daily monitoring and maintenance, the water will soon look very uninviting! Westcoast have a range of products to help you keep your equipment and hydrotherapy water in top condition and inviting to use.

## Water testing and monitoring:

We have a range of products from simple entry level visual test strips giving instant test results, through to top of the range highly accurate Photometers.

**Insta-Test 5** measures Free Chlorine, Bromine, Total Chlorine, Alkalinity, pH, and Total Hardness. 50 Strips in each pot.

**Lovibond 3 in 1** Photometer tests Free and total Chlorine, pH and Total Alkalinity. Complete with reagent tablets for 100 of each of the test, three sample cells, crushing rod, accessories and instructions.

## Lovibond 6 in 1

Photometer tests Free and total Chlorine, pH, Total Alkalinity, Calcium Hardness, Cyanuric acid. Simple button layout and robust waterproof design make them easy to use and ideal for testing pool water.

**Blue Connect**, the smart pool analyser, is a smart device that combines a water quality sensor and smart algorithms which mix water data, weather data and user data to provide you with real time information about the quality and the temperature of your pool water. This can help you monitor your pool even when your pool is closed and you are at home. The Blue connect will provide you with information on how much sanitiser and balancing chemicals to add taking the guess work out of chemical dosing. Multiple users can access the data via an App on their smart phone to allow both operators and managers to view the real time data and the hourly, daily, weekly and monthly history.

## Swim jets

Swim jets turn your hydrotherapy pool into an endless pool. Depending on the capability of the swimmer, the swim jet can be selected for its power and performance to swim against. From gentle rehabilitation to the competing athlete. Swim jets can be positioned anywhere within the pool and multiple jets can be fitted in bigger pools. Choose from standard swim jet package, rehabilitation swim jet package, athletes swim jet package.

**Hand Held Massaging Jet**  
The Hand-Held Spa Massage Jet is a flexible pulsing jet that allows you to target specific muscle groups.

## Chemicals

Westcoast carries a full range of water balancing and sanitising chemicals most of our Hydrotherapy Pools come complete with a starter bucket of chemicals along with samples of consumables and maintenance products. All available from our website.

## Auto dosing systems

Auto dosing takes the guess work out of adding chemicals, Westcoast have many different options available from fully automatic systems that Westcoast Engineers control remotely for you, down to simple dosing systems that measure and dispense chlorine and pH adjustment.

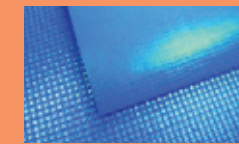

## UV Disinfection Light

UV disinfection light efficiently and safely disinfects the water. It neutralises bacteria, viruses and other primitive organisms and prevents them from reproducing. Whilst we do not recommend relying on the UV system to sanitise the water alone. Installing a UV light system can reduce the use of chlorine and other chemicals up to 80%, providing you with fresh, clean and clear water.

## Around the Pool

**Pool covers** Hydrotherapy Pools are traditionally run at higher temperatures that regular public swimming pools so to help you keep your costs down we supply high quality long lasting temperature retaining covers. Our 6mm Thermolux foam heat retaining cover is made from closed cell PE foam and benefits from a laminated underside and a strong woven polyethylene top coat making it extremely hard wearing. Suitable for pools run up to 30 degrees Centigrade. When fitted can reduce heat loss by 85-90%. A thicker temperature retaining 12mm foam is available for pools and Hot Tubs running up to 40 Degrees Centigrade and Ice Baths. A slightly cheaper option is a heat retaining Bubble weave cover, not to be confused with a solar cover, this heat retaining cover has a 400 micron density and a tough wear resistant woven surface.

**Under water cameras**, see and record the progress of your patient from above and below the water. Cameras can be positioned above a treadmill or pool or fitted into the pool wall for underwater visuals. The monitor displays the image for either the pool user or the therapist to ensure the correct movement is taking place. The camera is also connected to a DVR system and the footage is recorded to track progress or for comparison or as part of patient review. Why not have another camera positioned at your reception or entrance so you can see who has arrived even when you are working with another patient?

## Rollers for Pool Covers

For larger pools you may need some assistance with your pool cover. Westcoast supply rollers to help you move and store your pool cover (not suitable for 12mm covers), this can be floor or wall mounted and usually will be placed along the short edge of the pool.

## Pool Maintenance Kits and Floor Vacuum

The skimmer in your pool will take any debris floating on the water surface, debris that has sunk to the bottom of the pool will require vacuuming out. Our Pool Maintenance kit will enable you to keep your swimming pool clean and free of dirt taken in by swimmers. The kit consists of Pool wall Cleaning Brush, Surface Skimming Net, Vacuum Head and a Telescopic pole for attaching to the above items also a Vacuum hose for depositing the debris straight to your filter.

## Automatic Pool Cleaners

Your maintenance kit will have all you need to vacuum the pool manually, but when you want to go one step further, our range of automatic pool cleaner's start with a rechargeable hand held vacuum and go up to a fully robotic brush action bottom cleaner, both types have their own collection canister.

## External and Internal ramps and Steps and platforms

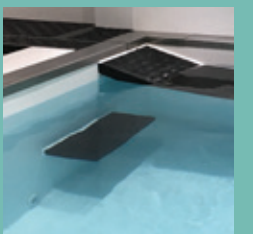

Accessing the hydrotherapy pool needs to be safe all concerned, so whatever your patient needs are we can create the ideal solution that meets your business needs and safety requirements.

**External Ramps** We don't include a standard external ramp or steps with our pools because the size, angle and styling of the external entry is dependent on the depth the pool is built into the ground, the floor conditions and interior layout of your pool room. When your room layout is finalised we can discuss your specific requirements along with our recommendations to ensure a safe way to enter and exit your pool. Westcoast can then quote to build you either an external ramp or steps along with any hand rails required using polypropylene, stainless steel and even toughened glass.

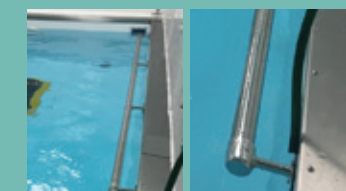

**Internal steps** can be built in various different widths to cater for single persons or wider for more people or animals.

**Internal Resting platforms** are often positioned in pools to allow the swimmer the opportunity to rest for short periods while remaining in the pool. These platforms are built into the mould for the Derwent and Lakes pools. The Eden pool can have resting platforms positioned in multiple places.

**Internal ramps** Most animal pools will be fitted with an internal ramp, these ramps are built into the mould for the Derwent and Lakes pools. The Eden pool will have the option to have the ramp positioned to your choice.

**Internal hand rails** Horizontal waterline hand rails in stainless steel are available for support within the pool fitted on just one side or up to all four sides of your pool
