

## Servicing the Water Walker

### **Annual Service**

An annual Service is based mainly around the filtration plant and check over of the Walker treadmill. The time allowed for an annual service is around 2 hours and can often be carried out by a regular swimming pool engineer.

### **Major Water Walker Mechanical service and overhaul 5 year or heavy use service**

A Major Water Walker Mechanical service and overhaul is a specialist service to the treadmill conveyor mechanics whereby most of the components that wear are replaced. Several hours are allowed for this major overhaul and we recommend that you keep the equipment free from appointments for the entire day. Any parts that have useful life left in them will be left on site to be kept for emergency repairs at a later date. The object of the major overhaul is to bring the conveyor back to factory standards to enable customers to have several years of use from the treadmill as they did when it was new.

The parts replaced / supplied in a Major Mechanical service are:

- New treadmill belt
- New tension rollers
- New door seal
- New set of bearings on rear roller

Parts not included but can be fitted during the service visit. (labour charge included in major service)

- Replacement Heater
- Drum Motor
- Non return valve 2lb
- Non return valve 10lb
- Gate / ball valve
- Replacement Sand Filter complete with multiport and media
- Replacement Multi port valve
- Flow switch (part of filtration plant)
- Float switch (in the base of the treadmill)
- Replacement bulb (control box)

The filtration plant pack is not usually carried out during this service. If you would like an annual service carried out on the plant pack please let us know when we are planning your job. Any parts needing replacement can be addressed while on site provided any problems have been highlighted prior to the visit.
